# Podiatry training sets

## Technology

Queensland University of Technology (QUT) researchers have developed new training sets for teaching podiatry courses.

The training sets utilise prefabricated foot moulds for orthotics production that help to streamline and standardize learning and assessment, and the accompanying course materials detail the teaching process. Available in three ascending levels of difficulty, the training sets are suitable for courses ranging from introductory to advanced.

## Market

The training sets are designed for use in any undergraduate or postgraduate podiatry program, and provide the following advantages:

- Standardized teaching tools
- Streamlined, time-saving teaching approach
- Flexible teaching for students of different levels
- Easy student assessment.

## Business Opportunity

An opportunity exists for educational institutions to license these training sets. **bluebox** welcomes enquiries regarding licensing terms and package contents.

## Contact

The technologies team at **bluebox**, the technology transfer and commercialisation company for QUT, consists of experienced professionals with industry-relevant technical backgrounds and a broad range of skills in management, legal, patent and financing areas.
